

Notice of Consent to HIV Blood Testing

A law was enacted in Virginia in 1989 which authorized health care providers to test their Patients for HIV antibodies when the health care provider is *ACCIDENTALLY EXPOSED* to blood or body fluids in a manner which may transmit the human immunodeficiency virus (HIV). However, you would be informed before any of your blood would be tested for HIV antibodies. The testing would be explained and you would be given the opportunity to ask any questions you might have.

In the event of one of our health care providers is exposed to potentially infectious body fluids; permission is hereby granted to test my blood.

The expense is covered by Coastal Dermatology.
